CERTIFICATION
All cabinetry carries the Kitchen Cabinet Manufacturers Association (KCMA) certified cabinet seal, and complies with American National Standards Institute (ANSI) specification number A161.1-1995.

WALL CABINET CONSTRUCTION
Face Frames – 3/4” thick kiln dried ash, oak, maple, or similar hardwood depending on cabinet style, precisely fitted, glued and fastened at all joints.

Bottoms – 3/8” thick furniture board finished to match other interior components in either maple woodgrain or white depending on style. Bottom is dadoed into face frame, sides and back.

Sides – 3/8” thick furniture board finished to match other interior components in either maple woodgrain or white depending on style. Exterior side surfaces are finished in a complementing woodgrain or white depending on cabinet style and stain color. Sides are dadoed into face frame, top, bottom, and back.

Backs – 3/8” thick furniture board finished to match other interior components in either maple woodgrain or white depending on style. Back is recessed and dadoed into sides. Back is dadoed to accept top and bottom.

Screwing Rails – 3/8” thick furniture board concealed behind 3/8” cabinet back.

Shelves – 1/2” thick medium density fiberboard in either maple woodgrain or white depending on cabinet style. Fully adjustable in 24”, 30”, 36” and 42” heights utilizing locking shelf clips.

BASE CABINET CONSTRUCTION
Face Frames – 3/4” thick kiln dried ash, oak, maple, or similar hardwood depending on cabinet style, precisely fitted, glued and fastened at all joints.

Bottoms – 3/8” thick furniture board finished to match other interior components in either maple woodgrain or white depending on cabinet style. Bottom is dadoed into sides and face frame.

Sides – 3/8” thick furniture board finished to match other interior components in either maple woodgrain or white depending on style. Exterior side surfaces are finished in a complementing woodgrain or white depending on cabinet style and stain color. Sides are dadoed into bottom and face frame.

Backs – 1/8” thick hardboard in either maple woodgrain or white depending on cabinet style. Back is recessed and dadoed into sides.

Shelves – 1/2” thick medium density fiberboard in either maple woodgrain or white depending on cabinet style. Shelf is half depth and is dovetailed into sides.

Toe Kick – 5/8” particleboard. Toe kick is mounted internally and extends from the bottom of the base floor to the bottom of the cabinet for full support.

DRAWER BOX CONSTRUCTION-75# CAPACITY
Drawer Box Sides – 1/2” thick medium density fiberboard dovetailed and glued into a four-sided box. Sides are dadoed to accept drawer bottom. All sides are finished in maple woodgrain or white depending on style.

Drawer Bottoms – 1/8” thick hardboard in maple woodgrain or white depending on style. Drawer bottoms are dadoed into sides and hot melt glued.

DOOR AND DRAWER FRONTS
MELAMINE:

Encore II – Encore door and drawer fronts are manufactured using 5/8” thick chemical resistant double-sided melamine on medium density fiberboard. The top and bottom of each Encore door and drawer front is contoured to provide a finger pull. Horizontal edges are contour edge banded with a heat transfer fail to complement the door material and match the frame and side colors. Vertical edges are machined and edge banded at a 90-degree angle to the face in the same material as the horizontal edges.

Lumina II – Lumina door and drawer fronts are manufactured using 5/8” thick chemical resistant double-sided melamine on particle board. One horizontal and two vertical edges are edge banded with PVC edge banding. A solid hardwood J-Pull finished to match the cabinet face frame is fitted and attached to the remaining horizontal edge utilizing adhesive and coated fasteners.

Legacy – Legacy door and drawer fronts are manufactured using 5/8” thick chemical resistant double-sided melamine on particleboard. One horizontal and two vertical edges are edge banded with durable PVC edge banding. A solid hardwood J-Pull finished to match the cabinet face frame is fitted and attached to the remaining horizontal edge utilizing adhesive and coated fasteners. Legacy door and drawer fronts are designed with 1/4” reveal between frame edge and side door or drawer front. Due to this, special consideration should be given to clearances, corners and appliances when designing a Legacy kitchen or bath.

Lexus – Lexus door and drawer fronts are manufactured using 5/8” thick chemical resistant double-sided melamine on particleboard. All door and front edges are laminated with PVC edge banding for a clean, uninterrupted appearance. Lexus door and drawer fronts are designed with 1/4” reveal between frame edge and side door and drawer front and require optional decorative hardware (Pulls or Knobs) for opening. Due to this, special consideration must be given when designing a Lexus kitchen or bath.

WOOD FLAT PANEL:

Avalon – Square-Cathedral Avalon doors are manufactured using 3/4” thick by 2” wide solid ash hardwood assembled at all four corners using mortise and tenon joints, adhesive and coated fasteners. Door rail and stiles are machined to receive a 1/4” oak hardwood veneer panel. Cathedral doors feature the same material and construction as the Square door except the top rail is 3 3/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid ash hardwood and have an edge profile to match the door.

Centurion II – Square-Cathedral Centurion doors are manufactured using 3/4” thick by 2” wide solid oak hardwood assembled at all four corners using mortise and tenon joints, adhesive and coated fasteners. Door rail and stiles are machined to receive a 1/4” oak hardwood veneer panel. Cathedral doors feature the same material and construction as the Square door except the top rail is 3 3/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid oak hardwood and have an edge profile to match the door.

Mapleton – Square-Cathedral Mapleton doors are manufactured using 3/4” thick by 2” wide solid maple hardwood assembled at all four corners using mortise and tenon joints, adhesive and coated fasteners. Door rail and stiles are machined to receive a 1/4” maple hardwood veneer panel. Cathedral doors feature the same material and construction as the Square door except the top rail is 3 3/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid maple hardwood and have an edge profile to match the door.

Princeton II – Square-Cathedral Princeton doors are manufactured using 3/4” thick by 2 1/2” wide solid oak hardwood assembled at all four corners using mortise and tenon joints, adhesive and coated fasteners. Door rail and stiles are machined to receive a 1/4” hardwood veneer panel. Cathedral doors feature the same material and construction as the Square door except the top rail is 4 1/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid oak hardwood and have an edge profile to match the door.
WOOD RAISED PANEL:

Aurora – Square-Cathedral  Aurora doors are manufactured using 3/4” thick by 2 1/2” wide solid ash hardwood assembled at four corners using mortise and tenon joints, adhesive and coated fasteners. Rubber expansion balls are inserted into the mortise of each stile to allow for the natural expansion and contraction of the solid panel. Aurora door rails and stiles are machined to receive a 9/16” thick solid ash hardwood panel shaped on four sides with a cove profile to create the raised panel. Cathedral doors feature the same material and construction as the Square doors except the top rail is 4 1/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid ash hardwood and have an edge profile to match the door.

Cambridge – Square-Cathedral  Cambridge doors are manufactured using 3/4” thick by 2 1/2” wide solid oak hardwood assembled at four corners using mortise and tenon joints, adhesive and coated fasteners. Rubber expansion balls are inserted into the mortise of each stile to allow for the natural expansion and contraction of the solid panel. Cambridge door rails and stiles are machined to receive a 9/16” thick solid oak hardwood panel shaped on four sides with a cove profile to create the raised panel. Cathedral doors feature the same material and construction as the Square doors except the top rail is 4 1/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid oak hardwood and have an edge profile to match the door.

Majestic – Square-Cathedral  Majestic doors are manufactured using 3/4” thick by 2 1/2” wide solid maple hardwood assembled at four corners using mortise and tenon joints, adhesive and coated fasteners. Rubber expansion balls are inserted into the mortise of each stile to allow for the natural expansion and contraction of the solid panel. Majestic door rails and stiles are machined to receive a 9/16” thick solid maple hardwood panel shaped on four sides with a cove profile to create the raised panel. Cathedral doors feature the same material and construction as the Square doors except the top rail is 4 1/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid maple hardwood and have an edge profile to match the door.

Pembrook II – Square-Cathedral  Pembrook doors are manufactured using 3/4” thick by 2 1/2” wide solid hardwood assembled at four corners using mortise and tenon joints, adhesive and coated fasteners. Rubber expansion balls are inserted into the mortise of each stile to allow for the natural expansion and contraction of the solid panel. Pembrook door rails and stiles are machined to receive a 9/16” thick solid hardwood panel shaped on all four sides with a cove profile to create the raised panel. Cathedral doors feature the same material and construction as the Square doors except the top rail is 4 1/4” wide and is machined to create a cathedral shape at the top of the door. Door edges are reverse beveled and contoured to provide easy cabinet access. Drawer fronts are manufactured using 3/4” thick solid hardwood and have an edge profile to match the door.

THERMOFOIL (VINYL):

Crystal – Crystal doors are manufactured from 5/8” thick medium density fiberboard core which has been routed to give a panel-in-frame appearance. Rigid white thermofoil (Vinyl) is laminated to the front and edges of the door with a white low-pressure melamine applied to the back for balance. Door edges feature a 12-degree reverse bevel on all four edges for easy cabinet access and clean cosmetic appearance. Crystal drawer fronts are manufactured from the same materials as the door with a flat thermofoil face, shaped edges, and a 12-degree reverse bevel on all four sides for ease of opening.

FUNCTIONAL HARDWARE

Hinges – Encore II, Lumina II, Legacy, Lexus, Avalon, Centurion II, Mapleton, Princeton II, Aurora, Cambridge, Majestic, Pembrook II and Crystal feature concealed self-closing hinges with 110-degree opening capabilities. All hinges are designed for simple adjustment and carry a limited manufacturers lifetime warranty. Some hinges also offer 6way adjustment (in/out, up/down and side to side).

Drawer Guides – All cabinetry features self-closing, adjustable epoxy-coated, side-mounted guides with double captive rollers and built-in stop. Guides have a 75lb. load capacity and carry a limited manufacturers lifetime warranty.

FINISHES - Oak, Ash, Maple or Similar Hardwood

Finish Technique – All wood components are sanded to prepare surfaces for finish. Stain is applied to all components. A sealer is then applied and when dry, is sanded to prepare for top coating. A waterborn urethane top coat is then applied, creating a durable, household chemical and detergent-resistant finish.

Honey Oak/Ash – Traditional medium tone stain color. This hand wiped stain blends the natural color and grain variations within the wood without masking the natural beauty.

Ginger Oak/Ash – A lightly blended stain color. This hand wiped stain blends the various grain characteristics of the wood to give a more uniform natural look.

Spice Oak/Ash – A darker rich tone stain color. Hand wiping blends the rich color while enhancing the various grain characteristics of the wood.

Light Maple – A light translucent finish that gives a “natural maple” look to the hardwood by lightening and blending the various colors within the wood while accentuating its natural beauty.

Wheat – Light-medium tone finish. The hand wiped stain color lightly blends the grain and color variations in the wood accenting the natural beauty.

Cider – A medium toned stain. This stain blends and enhances the beauty of the various grains of the wood. (NOTE: Finish is only available on Mapleton and Majestic lines).

Nutmeg – Medium/dark tone finish on hardwood. Hand wiping accents the light/dark characteristics of the hardwood. The finish will magnify the range of light and dark color within the hardwood and is considered a feature of this product and not a defect.

Cherry Cinnamon – Rich burgundy cherry finish on solid hardwood. Hand wiping accents and magnifies the light/dark characteristics of the hardwood. Color variations within individual doors and fronts will be noticeable and are considered part of the beauty of the finish. These characteristics are inherent of the Cherry Cinnamon finish and are not a defect.

Fruitwood – Medium tone stain color. The stain color blends the natural color and grain variations within the hardwood. (Note: Finish is only available on face frames of Encore lines.)

Pickled – A semi-translucent spray finish. The finish shows a range of color on the hardwood due to its light masking effect. This characteristic of the Pickled finish is considered acceptable. (Note: Finish is only available on face frames of Encore lines.)

White – Durable white painted finish consisting of a white waterborn primer coat and a white waterborn top coat over hardwood that complements the white melamine or thermofoil doors. (Note: Finish is only available on face frames of Cierra, Lexus and Encore White/White lines.)

Important Product Advisories

Finishes are used that enhance the natural beauty of wood. Extra care is taken to assure a uniform finish. Because we believe in customer satisfaction we feel that it is important to explain some of the characteristics of the finish and the hardwood that it is applied to. Like a fingerprint, characteristic differences in color and grain are produced by nature in every tree. These variations are what create the beauty in our hardwood products. The variations in color and grain will cause variation in the finish, even though identical finishing processes are applied. Also as hardwoods age the color and characteristics will change. White painted face frames (Cierra, Lexus and Encore White/White) will eventually have visible seam lines at the joint area and stained hardwood species will darken or lighten with time. Furthermore, sunlight, smoke, household cleaners and other environmental conditions can also affect the color of the cabinetry in the same way.

Special Note – In an effort to provide the best possible products and to preserve our commitment to value and quality, we reserve the right to alter design specifications and materials if required.
